Buzzards Bay Project National Estuary Program

DATE: August 2, 2010

RE: Estimates of planned sewering in the Wareham River estuary

You requested the BBNEP's best estimate of the number of septic systems that the town of Wareham will connect to the sewer system in the next few years. In Table 1, we provide such an estimate based on a summary of units in the 11 priority areas identified by the town. These estimates were based on maps in the town of Wareham 2002 and 2006 updates (Figure 1) and recent conversations with the sewer department. A map of existing sewered areas, and the planned sewered areas are illustrated in Figure 2.

Please note that only six of the eleven priority areas listed below are in the Wareham River estuary (note asterisks). In addition, only about 75% of the units in the Cromeset Park area are actually within the Wareham River watershed (Figure 2). We have confirmed the town estimates based on our GIS analysis for the watershed (second column). The actual numbers to be sewered depend on various factors, but you should use the current town estimates for planned sewering. Based on the town estimates, plus our GIS estimates for the Cromeset park area (bold values in Table 1), our current best estimate is that 720 units will be sewered in the Wareham River estuary watershed in the next few years. It is worth noting that although the town laid sewer pipe in part of the Wareham River estuary watershed, the town has not yet connected septic systems to the municipal wastewater collection system in those areas.

Table 1. Town and BBNEP GIS estimates of units expected to be sewered.

	CWMP/	
Priority site areas	Town	GIS WRE
(*=principally in WRE watershed)	estimates	shed Units
Rose Point	236	0
Beaver Dam Estates	44	0
Weweantic Shores	234	0
Parkwood Beach*	331	341
Oakdale*	148	164
Cromeset Park* (portion)	124	93
Mayflower Ridge*	47	48
Briarwood Beach	140	0
Linwood and Ladd Ave*	30	38
Agawam Beach	106	0
Tempest Knob*	71	72
TOTALS	1,511	756
